DETAILED ACTION

Double Patenting

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 1-10 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-11; 1-9; and 1-11 of copending Application Numbers 10/062,193; 10/-66,326; and 10/062,196, respectively. Although the conflicting claims are not identical, they are not patentably distinct from each other because the steps of identifying, selecting solving, and training in the present application are already covered by the steps of selecting solving, and training in the co-pending applications, and would therefore extend coverage if patented.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

3. Claims 1-10 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-9 and 1-11 of U.S. Patent Numbers 6,907,591 and 6,883,148, respectively. Although the conflicting claims are not identical, they are not patentably distinct from each other because the elements of defining extraction sub-problem, training cases of a neural network, calculating a parameter in US Patent 6,907,591, and identifying selecting solving and training steps of US Patent 6,883,148 although not identical claim language, would extend patent coverage if patented in the present application 10/061,945.
